To Eliminate your Material Flow Problems

REALTEC

EXEN Flow Aid Equipment...

- Pneumatic Air Knocker
- Pneumatic Vibrator
- Pneumatic Blaster
- Vibration Motor

Effective utilization of raw material handling can be experienced by using the principle "First In, First Out".

To help you optimize this principle, the use of flow-aid equipment is necessary to maintain the flow of material in bins, hoppers and silos as every application is unique and different material respond differently to certain equipment.

REALTEC carries a full range of Pneumatic Flow Aid Products to specifically address flow problems.
